Release Notes

BUG FIX (13131) – The system was allowing for a licensee to upload on behalf of another licensee. This was fixed and deployed to the test environment. The system is not allowing for anyone other than authorized users to upload on behalf of the respective license for all file types.

BUG FIX (13183) – Issue was found that when the Inventory Transfer csv was submitted, the system was validating FromLicenseNumber and should have been validating to ToLicenseNumber. This was fixed and deployed to the test environment. The system is now validating on the ToLicenseNumber.

BUG FIX (13184) – Issue was found that when the Lab Test file was submitted, the system was throwing an incorrect error due to the system validating the file name against the license number in the csv file and not the lab license number. This was fixed and deployed to the test environment. The system is now validating on the lab license number as expected.

BUG FIX (13185) – An invalid error was received on a Sales file. System was expecting sales csv to require a sold to license number for a retail recreational sale. This is not a required entry unless it is a Wholesale sale. This was fixed and deployed to the test environment. The system is now not giving an invalid error if there is no numeric value in the csv file.

BUG FIX (13188) – When the Integrator interface is processed during the daily job execution, the backup (secondary) email address was overwriting the primary entry which would create access issues for the primary. This was fixed and deployed to the test environment. The system is not overwriting the primary email for integrators any longer and all access issues should be restored.
