Release Notes

BUG FIX (13506) – It was found that the system was not deactivating closed entities leaving change of locations and assumptions to result in multiple active entities for one licensee. A fix was deployed and tested in the testing environment and now the system will remove the relationships appropriately.

BUG FIX (13655) – Issue was found that an integrator was unable to upload on behalf of their licensees. It was determined the csv file that was being uploaded was from a mac. A fix was deployed to the testing environment that will convert all .csv line endings regardless of how they were created so the system can accept them. This was tested and the system now allows for all .csv types.
