

JOB AID: UNDERSTANDING SEED TO SALE TRACEABILITY

LICENSEE WORKFLOW DIAGRAMS

Understanding the general “happy path” workflows that licensed facilities follow is imperative for understanding seed to sale traceability within Leaf Data Systems. Upon understanding these core workflows, State Users will have the knowledge necessary to understand the more complex versions of these workflows (involving combination of batches to form end products) and how to track inventory and plants from seed to sale and back to seed.

Following are the workflow diagrams (by licensee type) showing the functions that they perform which are relative to the retrievable data from the system for State Users.

JOB AID: UNDERSTANDING SEED TO SALE TRACEABILITY (LICENSEE WORKFLOW DIAGRAMS)

Processing Facility Workflow (High Level Overview of System Functionality)
