

Date:	December 9, 2020
То:	Jane Rushford, Board Chair Ollie Garrett, Board Member Russ Hauge, Board Member
From:	Casey Schaufler, Policy and Rules Coordinator
Сору:	Rick Garza, Agency Director Megan Duffy, Deputy Director Justin Nordhorn, Chief of Enforcement Becky Smith, Licensing Director Kathy Hoffman, Policy and Rules Manager

Subject: WAC 314-55-010 – Definitions; New Section WAC 314-55-550 – Marijuana vapor products; New Section 314-55-1055 – Ingredient Disclosure.

The Policy and Rules Coordinator requests approval to file a rule proposal (CR 102) for the rule making described in the CR 102 Memorandum attached to this order and presented at the Board meeting on December 9, 2020.

If approved for filing, the tentative timeline for the rule making process is outlined below:

December 9, 2020	Board is asked to approve filing proposed rules (CR 102). CR 102 filed with the Office of the Code Reviser. LCB webpage updated and notice circulated by rules distribution list. Formal comment period begins.
January 6, 2021	Notice published in the Washington State Register.
February 3, 2021	Public hearing held and formal comment period ends.
March 17, 2021	Board is asked to adopt rules if no substantive changes are made (CR 103). Concise Explanatory Statement provided to individuals offering written and oral comment at the public hearing, and during the formal comment period, consistent with RCW 34.05.325. CR103 and adopted rules are filed with the Office of the Code Reviser. LCB webpage updated and notice circulated to all WSLCB GovDelivery subscribers.

April 17, 2021	Rules are eff specified).	Rules are effective 31 days after filing (unless otherwise specified).

CR 102 Memorandum

Regarding WAC 314-55-010 – Definitions; New Section WAC 314-55-550 – Marijuana vapor products; New Section WAC 314-55-1055 – Ingredient Disclosure

Date:December 9, 2020Presented by:Casey Schaufler, Policy and Rules Coordinator

Background

On September 27, 2019, Governor Inslee issued Executive Order 19-03 to address an outbreak of lung injuries emerging in previously healthy individuals who had vaped THC or nicotine vapor products.

Under direction of Executive Order 19-03, on October 10, 2019, the Washington State Board of Health (SBOH) issued emergency rules prohibiting the sale of flavored vapor products by persons licensed under chapter 69.50 RCW or chapter 70.345 RCW.

On October 16, 2019, the Washington State Liquor and Cannabis Board (Board) adopted an emergency rule as WSR 19-21-100 creating new WAC 314-55-1055 requiring manufacturers of THC vapor products to disclose all compounds, including ingredients, solvents, additives, etc. used in the production and processing as well as the source of all vapor products as directed by Executive Order 19-03.

On November 20, 2019, the SBOH adopted an emergency rule as WSR 19-24-001 on November 20, 2019, prohibiting the sale of vapor products containing vitamin E acetate. The SBOH found that the outbreak of lung disease continued to grow, and that the adoption of an emergency rule prohibiting the sale of vapor products containing vitamin E acetate was necessary for the preservation of the public health, safety, and general welfare. The SBOH relied on the following to support its finding:

- In July 2019, the United States Centers for Disease Control and Prevention (CDC), United States Food and Drug Administration (FDA), state and local health departments, and other clinical and public health partners began investigating outbreaks of lung injury associated with e-cigarette product use, or vaping.
- In September 2019, the CDC activated its Emergency Operations Center to aid in the investigation of the multistate outbreak.

CR 102 Memo MJ Vapor Products 12/09/2020

- As of November 13, 2019, there have been two thousand one hundred seventy-two confirmed cases reported across forty-nine states, the District of Columbia, Puerto Rico and the United States Virgin Islands, including forty-two deaths confirmed in twenty-four states. Fourteen cases of lung injury have been reported in Washington State.
- As part of the investigation into the multistate outbreak of lung disease associated with the use of vapor products, the CDC conducted laboratory tests of twenty-nine samples of fluid collected from the lungs of patients with vaping-associated lung disease from ten states. An article released on November 8, 2019, showed that all of the samples contained vitamin E acetate, providing direct evidence of vitamin E acetate at the primary site of injury in the lungs. Vitamin E acetate is a chemical that is used as an additive or thickening ingredient in vapor products. The CDC has not determined that vitamin E acetate is present in only THC vapor products or only non-THC vapor products. THC was identified in eighty-two percent of the samples, and nicotine was identified in sixty-two percent of the samples. None of a range of other potential chemicals of concern was detected in the samples, but evidence is not yet sufficient to rule out the contribution of other chemicals, substances, or product sources to the disease. The CDC has identified vitamin E acetate as a chemical of concern and stated that, until the relationship of vitamin E acetate and lung health is better characterized, it is important that vitamin E acetate not be added to vapor products.

On February 5, 2020, the Board extended its emergency rule originally filed as WSR 19-21-100 that created new WAC 314-55-1055 requiring manufacturers of THC vapor products to disclose all compounds, including ingredients, solvents, additives, etc. used in the production and processing as well as the source of all vapor products as directed by Executive Order 19-03 as WSR 20-05-004.

The SBOH emergency flavor ban expired on or about February 7, 2020.

On March 19, 2020, the SBOH extended its emergency rule concerning the prohibition of the sale of vapor products containing vitamin E acetate as WSR 20-08-007.

On March 25, 2020, House Bill (HB) 2826 (Chapter 133, Laws of 2020), now codified in RCW 69.50.101, RCW 69,50.327, RCW 69.50.342, was enacted in response to concerns related to marijuana vapor product and vapor related lung illnesses. The legislation contained an emergency clause, and in its intent

section, found that "recent reports of lung illnesses associated with vapor products" demanded "serious attention by the state in the interest of protecting public health and preventing youth access. While state law grants the liquor and cannabis board broad authority to regulate vapor products containing marijuana, the legislature finds that risks to public health and youth access can be mitigated by clarifying that the board is granted specific authority to prohibit the use of any additive, solvent, ingredient, or compound in marijuana vapor product production and processing and to prohibit any device used in conjunction with a marijuana vapor product."

On May 27, 2020, the Board issued its own emergency rule as WSR 20-12-035 by establishing new WAC 314-55-1065 prohibiting the sale of vapor products containing vitamin E acetate consistent with the authority granted by HB 2826, now codified in RCW 69.50.101, RCW 69.50.327, RCW 69.50.342.

Also on May 27, 2020, the Board rescinded WSR 20-05-004, and replaced it with WSR 20-12-039, extending the requirements for disclosure of all ingredients used in the production of marijuana concentrates for inhalation and marijuana extracts for inhalation consistent ad described in WAC 314-55-105, consistent with the authority granted by HB 2826, now codified in RCW 69.50.101, RCW 69.50.327, RCW 69.50.342.

On July 17, 2020, the SBOH extended its emergency rule concerning the prohibition of the sale of vapor products containing vitamin E acetate as WSR 20-15-117.

On September 16, 2020, the Board extended emergency rule WAC 314-55-1055 as WSR 20-19-083, and emergency rule WAC 314-55-1065 as WSR 20-19-080. Each of these rules will expire on January 14, 2021.

On November 5, 2020, the SBOH adopted WAC 246-80-012 as WSR 20-23-006, permanently prohibiting the sale of vapor products containing vitamin E acetate. The prohibition applies to any person licensed under chapter 69.50 or 70.345 RCW. The rule became effective on November 15, 2020.

WSLCB Stakeholder Engagement

Comments received after the CR 101 was filed for this project on July 8, 2020 are presented in Attachment A.

The Board hosted two Listen & Learn sessions to provide an opportunity for licensees and other interested parties to review and comment on conceptual draft rules for the implementation of HB 2826.

The first session was held virtually on September 1, 2020, with approximately 100 people in virtual attendance via WebEx. The purpose of this session was to

review the conceptual draft rules necessary for the implementation of new definitions as required by HB 2826. Conceptual definitions for "characterizing flavor" and "terpenes, botanical terpenes, synthetic terpenes, terpenoids" were shared as new WAC sections 314-55-010(4) and 314-55-010(40), respectively. Participants were asked to indicate what they liked, didn't like, and to offer alternative language for the conceptual draft rules. These definitions had been made available to licensees and other interested parties two weeks prior when the first Listen & Learn Session invitation was sent via GovDelivery on August 18, 2020. Comments received are presented in Attachment B.

The second session was held virtually on September 29, 2020, with approximately 70 people in virtual attendance via WebEx. The purpose of this session was to review the conceptual draft rules for a new section of WAC, WAC 314-55-550 – Marijuana Vapor Products, establishing procedures of the Board to prohibit devices, additives, solvents, ingredients, or compounds in the production or use of marijuana vapor products consistent with HB 2826. Additionally, this session provided opportunity to review the content and format of the existing marijuana vapor product disclosure form. Board staff indicated to participants that the form itself was not necessarily part of the rulemaking effort, but that Board staff were using the session as an opportunity for identifying strengths and weaknesses of the disclosure process. Participants were asked to indicate what they liked, didn't like, and to offer alternative language for the conceptual draft rules and the disclosure form. The conceptual draft rules for WAC 314-55-550 and the disclosure form had been made available to licensees and other interested parties two weeks prior when the second Listen & Learn Session invitation was sent via GovDelivery on September 16, 2020. Comments received are presented in Attachment C.

Rule Necessity

New and amendment of existing rules is necessary to allow the WSLCB to implement marijuana vapor product regulation consistent with HB 2826, now codified in RCW 69.50.101, RCW 69,50.327, RCW 69.50.342 and to establish definitions as appropriate and necessary.

Description of Rule Changes

Amended Section. WAC 314-55-010(4) – Adds a definition for "characterizing flavor."

Amended Section. WAC 314-55-010(40) – Adds a definition for "terpenes" as well as sub-definitions for "botanical terpenes," "synthetic terpenes," and "terpenoids."

New Section. WAC 314-55-550 – Establishes procedures to prohibit devices, additives, solvents, ingredients, or compounds in the production or use of marijuana vapor products. Establishes process to determine if devices, additives, solvents, ingredients, or compounds in the production or use of marijuana vapor products should no longer be prohibited.

New Section. WAC 314-55-1055 – Affirms existing emergency protocols that require marijuana licensees to disclose all compounds, including but not limited to ingredients, solvents, additives, preservatives, thickening agents, terpenes, and other substances used to produce or added to marijuana concentrates for inhalation or marijuana-infused extracts for inhalation at any point during production and processing, regardless of source or origin. Disclosure must be made to the board on forms provided by the board.

Purpose of the proposal and its anticipated effects, including any changes in existing rules:

HB 2826 provides that the Board may adopt rules prohibiting any type of marijuana vapor product device, or prohibit the use of any type of additive, solvent, ingredient, or compound in the production and processing of marijuana products, including marijuana vapor products. Proposed new rule section, WAC 314-55-550, establishes a procedure for the Board to monitor, evaluate and prohibit devices or additives used in conjunction with marijuana vapor products, consistent with HB 2826 and codified in RCW 69.50.342(1)(m). The proposed rule also amends WAC 314-55-010(4) and (40), adding definitions for "characterizing flavor" and "terpenes." Proposed new rule section, WAC 314-55-1055, makes current emergency rules, originally adopted on October 16, 2019, under WSR 19-21-100 and most recently re-adopted September 16, 2020, under WSR 20-19-083 permanent. The proposed new rule section requires marijuana processors and producers to disclose all compounds, including but not limited to ingredients, solvents, additives, preservatives, thickening agents, terpenes, and other substances used to produce or added to marijuana concentrates for inhalation or marijuana-infused extracts for inhalation at any point during production and processing, regardless of source or origin. Disclosure must be made to the board on forms provided by the board, consistent with HB 2826 and codified in RCW 69.50.342(1)(n).

Reasons supporting proposal: New rule sections and amendment to existing rule is necessary to allow the WSLCB to implement marijuana vapor product regulation consistent with HB 2826, and to establish definitions for terms including, but not limited to "characterizing flavor," botanical terpenes," and others.

Statutory authority for adoption: RCW 69.50.342; RCW 69.50.345

Statute being implemented: HB 2826 (Chapter 133, Laws of 2020), now codified in RCW 69.50.101, RCW 69,50.327, RCW 69.50.342

🖾 No	Briefly summarize the agency's analysis showing	g how c	costs were calculated.
burden d			s rule. The rule does not impose any additional regulatory Id cost or otherwise alter the license application process.
ingredier retail lice productio	nt disclosure form and any related phone calls or o ensee to submit a disclosure form. Producer and p on of marijuana concentrates for inhalation and ma	commu rocess arijuana	processor licensee around one hour for each submitted nications with agency staff. It will not be necessary for a or licensees must disclose all ingredients used in the a-infused extracts for inhalation, and forms must be a producer or processor submits an ingredient disclosure

form up to two times a month, they could spend up to 24 hours per year on product disclosure forms. [1 hour per form x 24 forms per year = 24 hours per year]

According to the 2019 OES Databook (https://esd.wa.gov/labormarketinfo/report-library), the average hourly wage in Washington State for Secretaries and Administrative Assistants, Except Legal, Medical, and Executive (using the SOC Code 43-6014) is \$21.31. The estimated annual cost for these administrative activities is up to \$511.44 [\$21.31 avg. hourly wage x 24 hours = \$511.44].

Below are calculations for minor cost thresholds across all impacted license types based on the best analogous NAICS types. The minor cost does not exceed any of the thresholds for any of the license types. For these reasons, the proposed rules do not impose more than minor costs on businesses as defined by RCW 19.85.020(2).

2017 Industry NAICS Code	Estimated Cost of Compliance	Industry Description	NAICS Code Title	Minor Cost Estimate - Max of 1%Pay, 0.3%Rev, and \$100	1% of Avg Annual Payroll . (0.01*AvgPay)	0.3% of Avg Annual Gross Business Income (0.003*AvgGBI)
31199	\$ 511.44	Marijuana Processors	All Other Food Manufacturing	\$27,271.78	\$9,424.11 2018 Dataset pulled from USBLS	\$27,271.78 2018 Dataset pulled from DOR
111	\$ 511.44	Marijuana Producers	Crop Production	\$4,082.13	\$4,082.13 2018 Dataset pulled from USBLS	\$2,998.38 2018 Dataset pulled from DOR

□ Yes Calculations show the rule proposal likely imposes more-than-minor cost to businesses, and a small business economic impact statement is required. Insert statement here:

The public may obtain a copy of the small business economic impact statement or the detailed cost calculations by contacting:

NEW SECTION

WAC 314-55-1055 Ingredient disclosure. (1) All licensed marijuana processors and producers must disclose all ingredients used in the production of marijuana concentrates for inhalation and marijuana-infused extracts for inhalation.

(2) All chemicals, compounds, additives, preservatives, thickening agents, terpenes, and other substances used at any point in the production or processing of marijuana concentrates for inhalation or marijuana-infused extracts for inhalation, regardless of source or origin, must be disclosed to the board as follows:

(a) On a form provided by the board and stored by the licensee, either electronically or in hard copy, and made available for inspection if requested by an employee of the board; and

(b) In a manner directed by the board including, but not limited to, submission to an email address or other online platform provided and maintained by the board.

(3) The complete list of all chemicals, compounds, additives, preservatives, thickening agents, terpenes, and other substances used at any point in the production or processing of marijuana concentrates for inhalation or marijuana-infused extracts for inhalation, regardless of source or origin, that is required under subsection (2) of this section must be kept and maintained, consistent with recordkeeping requirements described in WAC 314-55-087, at the facility in which the products are processed. The list must be updated whenever there is any change in product composition.

[]

AMENDATORY SECTION (Amending WSR 18-22-055, filed 10/31/18, effective 12/1/18)

WAC 314-55-010 Definitions. The following definitions apply for the purpose of this chapter in addition to the definitions provided in RCW 69.50.101.

(1) "Applicant" or "marijuana license applicant" means any person or business entity who is considered by the WSLCB as a true party of interest in a marijuana license, as outlined in WAC 314-55-035. However, for purposes of determining an application's priority under RCW 69.50.331 (1)(a), only the person or business entity that is applying for the license will be considered the applicant.

(2) "Batch" means a quantity of marijuana-infused product containing material from one or more lots of marijuana.

(3) "Business name" or "trade name" means the name of a licensed business as used by the licensee on signs and advertising.

(4) <u>"Characterizing flavor" means a noticeable taste, other than</u> one of cannabis, resulting from an additive or combination of additives including, but not limited to, fruit, spice, herbs, alcohol, candy, or menthol, or that is noticeable before or during consumption of the cannabis product.

(5) "Child care center" means an entity that regularly provides child day care and early learning services for a group of children for periods of less than twenty-four hours licensed by the Washington state department of early learning under chapter 170-295 WAC.

(((5))) <u>(6)</u> "Consultant" means an expert who provides advice or services in a particular field, whether a fee is charged or not. A consultant who is in receipt of, or has the right to receive, a percentage of the gross or net profit from the licensed business during any full or partial calendar or fiscal year is a true party of interest and subject to the requirements of WAC 314-55-035. A consultant who exercises any control over an applicant's or licensee's business operations is also subject to the requirements of WAC 314-55-035(4).

(((6))) <u>(7)</u> "Cooperative" means a group of more than one, but no more than four qualified medical marijuana patients and/or designated providers who share responsibility for growing and processing marijuana only for the medical use of the members of the cooperative.

(((7))) (8) "Domicile" means a person's true, fixed, primary permanent home and place of habitation and the tax parcel on which it is located. It is the place where the person intends to remain and to which the person expects to return when the person leaves without intending to establish a new domicile elsewhere.

(((8))) (9) "Elementary school" means a school with a physical location for early education that provides the first four to eight years of basic education and recognized by the Washington state super-intendent of public instruction.

(((9))) (10) "Employee" means any person performing services on a licensed premises for the benefit of the licensee whether or not such person is compensated by the licensee.

(((10))) <u>(11)</u> "End product" means a marijuana product that requires no further processing prior to retail sale.

(((11))) (12) "Financier" means any person or entity, other than a banking institution, that provides money as a gift or loans money to the applicant/business and expects to be paid back the amount of the loan with or without reasonable interest. (((12))) (13) "Game arcade" means an entertainment venue featuring primarily video games, simulators, and/or other amusement devices where persons under twenty-one years of age are not restricted.

(((+13))) (14) "Harvest" means the marijuana plant material derived from plants of the same strain that were cultivated at the same licensed location and gathered at the same time.

(((14))) (15) "Immature plant or clone" means a marijuana plant or clone that has no flowers, is less than twelve inches in height, and is less than twelve inches in diameter.

(((15))) <u>(16)</u> "Intermediate product" means marijuana flower lots or other material lots that have been converted by a marijuana processor to a marijuana mix lot, marijuana concentrate or marijuana-infused product that must be or are intended to be converted further to an end product.

(((16))) (17) "Library" means an organized collection of resources made accessible to the public for reference or borrowing supported with money derived from taxation.

 $((\frac{17}{1}))$ (18) "Licensed premises" means all areas of a premises where the licensee has leasehold rights as listed in the property lease submitted to the board. Any vehicle assigned for the purposes of transporting marijuana, useable marijuana, marijuana concentrates, or marijuana-infused products shall be considered an extension of the licensed premises.

(((18))) <u>(19)</u> "Licensee" or "marijuana licensee" means any person or entity that holds a marijuana license, or any person or entity who is a true party of interest in a marijuana license, as outlined in WAC 314-55-035.

(((19))) <u>(20)</u> "Lot" means either of the following:

(a) The flowers from one or more marijuana plants of the same strain. A single lot of flowers cannot weigh more than five pounds; or

(b) The trim, leaves, or other plant matter from one or more marijuana plants. A single lot of trim, leaves, or other plant matter cannot weigh more than fifteen pounds.

(((20))) <u>(21)</u> "Lozenge" means a marijuana-infused product such as a hard candy, mint, pastille, tablet, or similar type of edible product that is generally swallowed whole, chewed and swallowed, or dissolved in the mouth.

(((21))) <u>(22)</u> "Marijuana strain" means a pure breed or hybrid variety of Cannabis reflecting similar or identical combinations of properties such as appearance, taste, color, smell, cannabinoid profile, and potency.

(((22))) (23) "Marijuana mix" means an intermediate lot that contains multiple strains of useable marijuana and is chopped or ground so no particles are greater than 3 mm.

(((23))) <u>(24)</u> "Marijuana mix infused" or "mix infused" means an end product that contains marijuana mix and may contain other intermediate products or useable marijuana.

(((24))) <u>(25)</u> "Marijuana mix packaged" or "mix packaged" means an end product containing only marijuana mix and no other product types.

(((25))) <u>(26)</u> "Member," except as that term is used in relation to registered cooperatives, means a principal or governing person of a given entity, including but not limited to: LLC member/manager, president, vice president, secretary, treasurer, CEO, director, stockholder, partner, general partner, limited partner. This includes all spouses of all principals or governing persons named in this definition and referenced in WAC 314-55-035.

(((26))) <u>(27)</u> "Paraphernalia" means items used for the storage or use of useable marijuana, marijuana concentrates, or marijuana-infused products, such as, but not limited to, lighters, roach clips, pipes, rolling papers, bongs, and storage containers. Items for growing, cultivating, and processing marijuana, such as, but not limited to, butane, lights, and chemicals are not considered "paraphernalia."

(((27))) <u>(28)</u> "Pesticide" means, but is not limited to: (a) Any substance or mixture of substances intended to prevent, destroy, control, repel, or mitigate any insect, rodent, snail, slug, fungus, weed, and any other form of plant or animal life or virus, except virus on or in a living person or other animal which is normally considered to be a pest; (b) any substance or mixture of substances intended to be used as a plant regulator, defoliant, or desiccant; and (c) any spray adjuvant. Pesticides include substances commonly referred to as herbicides, fungicides, insecticides, and cloning agents.

(((28))) (29) "Perimeter" means a property line that encloses an area.

(((29))) <u>(30)</u> "Plant" means a marijuana plant. (((30))) <u>(31)</u> "Plant canopy" means the square footage dedicated to live plant production, such as maintaining mother plants, propagating plants from seed to plant tissue, clones, vegetative or flowering area. Plant canopy does not include areas such as space used for the storage of fertilizers, pesticides, or other products, quarantine, office space, etc.

((((31))) (32) "Playground" means a public outdoor recreation area for children, usually equipped with swings, slides, and other playground equipment, owned and/or managed by a city, county, state, federal government, or metropolitan park district.

(((32))) <u>(33)</u> "Product(s) otherwise taken into the body" means a marijuana-infused product for human consumption or ingestion intended for uses other than inhalation, oral ingestion, or external application to the skin.

((((33))) (34) "Public park" means an area of land for the enjoyment of the public, having facilities for rest and/or recreation, such as a baseball diamond or basketball court, owned and/or managed by a city, county, state, federal government, or metropolitan park district. Public park does not include trails.

((((34))) (35) "Public transit center" means a facility located outside of the public right of way that is owned and managed by a transit agency or city, county, state, or federal government for the express purpose of staging people and vehicles where several bus or other transit routes converge. They serve as efficient hubs to allow bus riders from various locations to assemble at a central point to take advantage of express trips or other route to route transfers.

(((35))) <u>(36)</u> "Recreation center or facility" means a supervised center that provides a broad range of activities and events intended primarily for use by persons under twenty-one years of age, owned and/or managed by a charitable nonprofit organization, city, county, state, federal government, or metropolitan park district.

((((36))) (37) "Residence" means a person's address where he or she physically resides and maintains his or her abode.

((((37))) (38) "Secondary school" means a high and/or middle school with a physical location: A school for students who have completed their primary education, usually attended by children in grades seven to twelve and recognized by the Washington state superintendent of public instruction.

(((38))) (39) "Selling price" means the same meaning as in RCW 82.08.010, except that when the product is sold under circumstances where the total amount of consideration paid for the product is not indicative of its true value. Selling price means the true value of the product sold as determined or agreed to by the WSLCB. For purposes of this subsection:

(a) "Product" means marijuana, marijuana concentrates, useable marijuana, or marijuana-infused products; and

(b) "True value" means market value based on sales at comparable locations in the state of the same or similar product of like quality and character sold under comparable conditions of sale to comparable purchasers. In the absence of such sales of the same or similar product, true value means the value of the product sold as determined by all of the seller's direct and indirect costs attributed to the product.

(((39))) <u>(40)</u> "Terpenes" means a class of compounds that impart smell, taste, or both occurring in the cannabis plant which consist of a carbon skeleton derived from isoprene units. The word "terpene" may include, but is not limited to, the following:

(a) "Botanical terpenes" means constituents derived from a spice, fruit, vegetable or vegetable juice, edible yeast, herb, bark, bud, root, or leaf or similar plant material. Their significant function in cannabis products is flavoring. This includes:

(i) Essential oil, which is natural oil typically obtained by distillation and possessing the characteristic fragrance of the plant or other source from which it is extracted;

(ii) Oleoresin, which is a natural or artificial mixture of essential oils and a resin;

<u>(iii) Distillate; or</u>

(iv) Any product of roasting, heating, or enzymolysis which contains terpenes.

(b) "Synthetic terpenes" means any terpene that does not occur in the cannabis plant, or in other botanical sources, and is produced through chemical manipulation in a laboratory or similar facility.

(c) "Terpenoids" means the natural products and related compounds formally derived from isoprene units, or "isoprenoids," that have the same meaning as that found in the current version of the International Union of Pure and Applied Chemistry (IUPAC) and as hereafter amended.

(41) "Unit" means an individually packaged marijuana-infused solid or liquid product meant to be eaten or swallowed, not to exceed ten servings or one hundred milligrams of active tetrahydrocannabinol (THC), or Delta 9.

(((40))) (42) "WSLCB" means the Washington state liquor and cannabis board.

NEW SECTION

WAC 314-55-550 Marijuana vapor products. (1) The purpose of this section is to:

(a) Support and further the protection of public health and prevention of youth access consistent with RCW 69.50.101(xx).

(b) Mitigate the risks to public health and youth access by prohibiting the use of any additive, solvent, ingredient, or compound in marijuana vapor product production and processing when appropriate, consistent with RCW 69.50.342 (1)(m).

(c) Mitigate the risks to public health and youth access by prohibiting any device used in conjunction with a marijuana vapor product when appropriate, consistent with RCW 69.50.342 (1)(n).

(2) Procedure for prohibited substances.

(a) The board may prohibit any type of device used in conjunction with a marijuana vapor product, and may prohibit the use of any type of additive, solvent, ingredient, or compound in the production of marijuana vapor products that may pose a risk to public health or youth access.

(b) The board may consider, following consultation with the department of health or other authority the board deems appropriate, any relevant data when determining whether a device, additive, solvent, ingredient or compound may pose a risk to public health or youth access including, but not limited to:

(i) Case report data;

(ii) Other local, state and federal agency findings, reports, etc.;

(iii) A product or substance that is the subject of a recall under WAC 314-55-225;

(iv) Any other information sourced and confirmed from reliable entities.

(c) The board may prohibit the use of a product or substance by adoption of emergency or permanent rules. The board will provide notices of rule making consistent with the requirements of chapter 34.05 RCW.

(d) The board will maintain a list of prohibited substances prohibited by permanent or emergency rules on its website.

(e) The list of prohibited substances will be reviewed on an annual basis.

(f) Prohibited substances may be removed from the list of prohibited substances if the board determines, after a review consistent with (b)(i) through (iv) of this subsection, that it no longer poses a risk to public health or youth access.

Source	Commenter	Date Received	Comment
Email	David Heldreth	7/9/2020	NEW SECTION. Sec. 4. A new section is added to chapter 69.50 RCW to read as follows:18 19 (1) Except as provided in subsection (2) of this section, 20 marijuana processors may incorporate in marijuana vapor products a 21 characterizing flavor if the characterizing flavor is derived from 22 botanical terpenes naturally occurring in the cannabis plant, 23 regardless of source, and if the characterizing flavor mimics the 24 terpene profile found in a cannabis plant. Characterizing flavors 25 authorized under this section do not include any synthetic terpenes. 26 (2) If the board determines a characterizing flavor otherwise 27 authorized under this section may pose a risk to public health or 28 youth access, the board may, by rule adopted under RCW 69.50.342, 29 prohibit the use in marijuana vapor products of such a characterizing flavor.
			The state law clearly states that aside from cannabis-derived ingredients the only flavor that may be used is botanical terpenes. Botanical terpenes are a self defining category or classification with strict definitions. Botanical means coming from a plant for the source of the materials and terpenes are a class of chemical compounds. The key here is that the law does NOT say terpenes and similar classes of compounds, it does NOT say other compounds found in cannabis. It specifically says only terpenes and only terpenes that are sourced from plants. Thus terpenes from fungi, bacteria or any other source must be banned.
			As such only terpenes which are compounds in that exact class by scientific definition may be used. Terpenes are specifically hydrocarbons which only contain carbon and hydrogen atoms and NO oxygen or other atoms. They also must contain isoprene units in their structure.
			Terpenoids are a similar class of compounds which are similar to terpenes, as terpenes and terpenoids are both isoprenoids, but terpenoids are NOT terpenes. They contain oxygen and other compounds which explicitly deny their ability to be categorized as terpenes.
			As the law requires only terpenes to be allowed (unless sourced from cannabis), terpenoids and related compounds may NOT be legally utilized in cannabis products under the law. Also while the law gives the WSLCB the ability to make stricter rules banning more compounds there is no such allowance for allowing something the law does not allow. As such the WSLCB has no authority to allow terpenoids in cannabis products as the law does not allow them and thus any definition the WSLCB derives for botanical terpene must exclude terpenoids.
			Menthol, terpineol, camphor, citral are all examples of terpenoids or compounds with oxygen and other atoms which thus disqualify them from use or definition as a terpene. The WSLCB should as such define botanical terpenes as the chemical class is defined in all science otherwise the WSLCB will be violating the law. Here is the correct definition: "hydrocarbons, compounds containing only hydrogen and carbon, which also contain an isoprene structure and are sourced from plants.
			I also believe the entire formula of all flavor additives need to be disclosed to the WSLCB and put on packaging and labels. Currently companies are placing the name of a flavoring companies profile or flavor, but not the entire break down of the percentages and names of each compound. This is also required under the new vapor law. Companies attempt to say this will violate their proprietary formulas, but there is no protection for that in the vapor law or allowance to use that as a reason to not disclose. This is because our government has ruled that human health and truth in labeling is more important than IP. Especially when these brands are responsible for using tainted ingredients that led to the vape illness epidemic. As a former employee of a company that made flavor for vaping I can attest to the danger of allowing noncannabis ingredients to enter the market. I myself refuse to vape anything that isn't full cannabis or utilize any similar products because of what I know.
			New Section (n) Requirements for processors to submit under oath to the department of health a complete list of all constituent substances and the amount and sources thereof in each marijuana vapor product, including all additives, thickening agents, preservatives, compounds, and any other substance used in the production and processing of each marijuana vapor product.

Email	David Heldreth	7/24/2020	I'm forwarding a document I've shared with the OLCC which demonstrates that the terpene stereoisomers/enantiomers which are found in botanicals are not representational of those found in cannabis. As such under the law which was passed they may not be allowed in inhalation cannabis products as they are not mimicking the terpene profiles Found in cannabis and are even using some terpene enantiomers which are not found in cannabis. As such they should not be allowed.
			Begin forwarded message:
			Anthony Geltosky, Thanks for taking the time to speak today. Apologies for the lateness with this document, but I returned home late. I've attached it as a .docx and .pdf for your use. It outlines the variations in cannabis and other botanicals, difficulties in testing and methods to use as well as how these variations affect the body
Email	Michelle Anderson	8/21/2020	I do not feel that FLAVOR of any kind needs to be removed as flavorings is NOT what caused the lung damage to people. The Vitamin E Acetate is what caused the damage.
			I feel that "any place youth may congregate unrestricted or unsupervised" should cover everything in the way of restrictions and leaves room for improvement.
			I feel "School Grounds" should be separated and considered 24/7 enforceable from ANY drugs/alcohol of any kind. I wish that Park and school zones were 24/7 too!
			You guys are doing a great job! The listen and learn forums that take in everyone's opinion and then makes the best rules are DEFINITELY the way to continue governing! EXCELLENT Job!!
Email	Email David Heldreth	8/27/2020	As the Washington State law as written says that only botanical terpenes may be used this indicates that simply defining botanical terpenes as constituents derived from is insufficient, the law clearly indicates that only terpenes, not other constituents from botanical sources may be used. As such any other compounds used would be a violation of Washington State law. The law allows for the WSLCB to make more compounds restricted, but not to allow any additional compounds. As such all wording which extends to the use of anything other than the exact chemical class of terpenes is now allowed and must be altered as I have done below. Terpenoids are not actually chemically terpenes. They are related, but separate groups, simply amending them to have the same meaning under Washington regulation would be at the same time a violation of Washington State law as the law does not allow additional compounds, but only terpenes, again not related compounds.
			40. "Terpenoids" means the natural products and related compounds formally derived from isoprene units, or "isoprenoids," that have the same meaning as that found in the current version of the International Union of Pure and Applied Chemistry (IUPAC) and as hereafter amended.
			"Terpenes" means a class of compounds that imparts smell, taste, or both occurring in the cannabis plant which consist of a carbon skeleton derived from isoprene units and only hydrogen or carbon atoms. The word "terpene" may includes, but is not limited to the following:
			(a) "Botanical terpenes" means constituents terpenes derived from a spice, fruit, vegetable or vegetable juice, edible yeast, herb, bark, bud, root, or leaf or similar plant material. Their significant function in cannabis products is flavoring rather than to act as a drug.
			This includes:
			 (i) <u>Terpenes derived from</u> essential oil, which is natural oil typically obtained by distillation and possessing the characteristic fragrance of the plant or other source from which it is extracted; (ii) Terpenes derived from oleoresin, which is a natural or artificial mixture of essential oils and a resin;
			 (iii) <u>Terpenes derived</u> from Distillate; or (iv) Any product of roasting, heating, or enzymolysis which contains <u>only</u> terpenes.

			 (b) "Synthetic terpenes" means any terpene that does not occur in the cannabis plant, or in other botanical sources, and is produced through chemical manipulation in a laboratory or similar facility. (c) "Terpenoids" means the natural products and related compounds formally derived from isoprene units, or "isoprenoids," that have the same meaning as that found in the current version of the International Union of Pure and Applied Chemistry (IUPAC) and as hereafter amended.
Email	Crystal Oliver	9/1/2020	Comment 1: I tend to agree with Chris Masse's comment about the definition of characterizing flavor needing additional work when the language of the bill is considered which reads "marijuana processors may incorporate in marijuana vapor products a characterizing flavor if the characterizing flavor is derived from botanical terpenes naturally occurring in the cannabis plant, regardless of source, and if the characterizing flavor minics the terpene profile found in a cannabis plant. Characterizing flavors authorized under this section do not include any synthetic terpenes." The legislative language indicates that there exists characterizing flavor that mimic the terpene profile of cannabis and other types of characterizing flavors thus it does seem confusing to define it in WAC as a "a noticeable taste, other than one of cannabis" While my verbal comments focused on the second section of the definition of characterizing flavor including the word "noticeable" a second time and unnecessarily complicating the definition I wish to retract that recommendation and offer this definition instead: Characterizing flavor means a clearly noticeable taste. Comment 2: For the definition of botanical terpenes, the order should be revised from most used to least commonly used and vegetable juice seems unnecessary since vegetable is listed. The phrase "rather than to act as a drug" should be stricken as "drug" has a very specific definition and meaning in RCW 69.50 and seems inappropriate to add here. We also agree that edible yeast is not a botanical. Consider this definition in stead: Botanical terpenes means aromatic constituents derived from an herb, fruit, or vegetable's bark, bud, root, leaf or similar plant material. Their significant function in cannabis products is flavoring. This includes: Comment 3: We question why "oleoresin" is listed as a botanical terpene. It can contain terpenes but is not a botanical terpene. While oleoresin is one of the products of extraction, we are not certain if it is som

Email	Brooke Davies	9/1/2020	I wanted to let you know that I have a conflict with the Listen and Learn Session today. I will try my best to join late - however I may miss the meeting all together. I know today you are just discussing the definitions. I have held a few meetings with my members on this section and encouraged them all to participate today if they have strong feelings on this draft. In general WACA member feedback can on 010 Section (4) and (40) is summarized below:
			WAC 314-55-010 (4) - Definition of Characterizing Flavor
			This definition is in conflict with HB 2826 which expressly allows for characterizing flavor that mimics the flavor of cannabis.
			- at this time I do not have suggested language but will defer to our members who are participating in the listen and learn session today. Since we discussed these rules we have had more conversations about the purpose of this rule set and heard that it is not the LCB intention to regulate characterizing flavor but instead to set up a process to recall a substance if you need to, this could potentially change our approach to feedback.
			WAC 314-55-010 (40)(a) - Botanical terpene
			recommend striking the following from the definition: Their significant function in cannabis products is flavoring rather than to act as a drug.
Email	Johanna Williamson, Orchid	9/1/2020	Thank you for speaking with our Director of Compliance, Laurie Andrade the other day. She followed up with us on your conversation and as a result, we would like to provide you with the following:
	Essentials		1. Our statement and review of proposed rules (designed for discussion only).
			2. List of Ingredients - Lemon Burst - An example of a list of ingredients that comes with every product that goes out of our terpene
			manufacturer, Eybna's facility.
			3. Cannabis EO vs. Terpenes : Chromatogram showing cannabis strain's essential oil vs the recreated terpene profile crafted by Eybna, highlighting a crucial step in Eybna's development process where precision and consistency is achieved in every batch
			4. Terpenoids as therapeutic drugs and pharmaceutical agents - Discussing the several therapeutic properties of terpenes and their usage in
			the pharmaceutical world.
			5. Limonene Safety Evaluation - Evaluating the safety of Limonene via inhalation
			 6. Pinene Safety Evaluation - Evaluating the safety of Alpha Pinene via inhalation 7. Eybna's contact information and list of experts
Email	Johanna	9/1/2020	Here is a copy of the statement by our CEO in regards to the decisions you are trying to make in Washington around botanical terpenes (also
	Williamson, Orchid		included as an attached doc.). Please review all and let us know if you have any feedback, if we can be of further assistance, or how we can participate further in providing information for your committees and board on this topic:
	Essentials (pt 1)		To whom it may concern,
			This statement is in reference to the current discussions happening in Washington around banning additives in cannabis products - specifically terpenes derived from plants other than cannabis. We just went through this process in both Oregon and California, both of whom ultimately chose not to implement an outright ban on these products, because there was no evidence presented that could prove them to be harmful.
			In fact, our research and evidence (to be submitted to you for consideration) actually indicate that botanical terpenes manufactured in safe, clean, ISO-certified facilities with quality standards at the highest levels - are actually LESS toxic than the current cannabis-derived terpenes currently being used and manufactured without any regulation around quality control or best practices for manufacturing.
			The alternative that we supported for our agency in Oregon was: Instead of banning terpenes - that they issue requirements of terpene manufacturers, including good manufacturing practices that are held to a specific standard, as well as being required to openly provide a list

			of ingredients used in their manufacturing processes.
			We urge you to review the science supporting the use and clarifying the effects of terpenes derived from non-cannabis plants, and instead of assuming the danger in this particular product (an assumption of which there is no science to support), that you focus more on fighting substances that have been proven to be harmful (such as concentrated levels of hydrogen cyanide in black market products or the investigation of squalene and MCT being used in vape). We would also like to point out that the quality of manufacturing and emissions testing of hardware should be considered on an equally relevant playing field when asking the question, "How can we prevent more lung illnesses and deaths?".
			Our company was partially founded on the development of the highest quality vape hardware on the market, in addition to AFNOR/EU levels of emissions testing (testing the actual vape coming out of the hardware, not just the heavy metals or leeching potential) required in all of the products we make and use.
			Please review the documents we've submitted from our partners at the University of Jerusalem in Isreal on the manufacturing and effects of botanical terpenes, and please also reach out to us with any questions on hardware safety and how that plays a part in this conversation. Should you wish to speak with the scientists who compiled these documents for further insight, we will connect you right away.
			In addition, please review these comments on the recent Draft Rules for Discussion and Preproposal Statement of Inquiry on this topic:
Email	Johanna Williamson,	9/1/2020	From Preproposal Statement of Inquiry CR-101:
	Orchid Essentials (pt 2)		"However, before adopting either of these types of rules, the Board must have determined, following a consultation with the Department of Health (DOH), or any other authority the Board deems appropriate, the device, additive, solvent, ingredient, or compound may pose a risk to public health or youth access."
			By determining that a compound "MAY" pose a risk, rather than determining that a compound DOES propose a risk, backed by scientific evidence, the state runs the risk of creating a false sense of security and a diversion of focus around something that "MAY" actually NOT be the culprit! This decision needs to be based on fact, not opinion.
			From WAC 314-55-010 Conceptual Rules Designed for Discussion Only:
			""Botanical terpenes" means constituents derived from a spice, fruit, vegetable or vegetable juice, edible yeast, herb, bark, bud, root, or leaf or similar plant material. Their significant function in cannabis products is flavoring rather than to act as a drug. This includes:"
			This is incorrect. The EFFECTS of terpenes are equally as important, if not more so as the smell and flavor that they impart. Please see our list of FDA approved pharmaceutical medications using botanical terpenes for effect, not flavor.
			"(b) "Synthetic terpenes" means any terpene that does not occur in the cannabis plant, or in other botanical sources, and is produced through chemical manipulation in a laboratory or similar facility."
			This is also somewhat misleading, as botanical terpenes can be formulated using plant sources in a laboratory or similar facility.
			"(2) Procedure for prohibited substances. (a) The Board may prohibit any type of device used in conjunction with a marijuana vapor product, and may prohibit the use of any type of additive, solvent, ingredient, or compound in
			the production of marijuana vapor products that may pose a risk to public health or youth access."
			We urge you to consider that the Board's authority over a ban on anything be WHEN they have scientific evidence available to prove the

			exact and particular compound that is causing risk to public health. Rather than giving authority to ban things (which could be the WRONG things, creating a false sense of security and further endangering the public), based on opinion, a feeling, a general agreement, rather than actual scientific data.
Email	Stacey Okland	9/2/2020	I was on the call when WAC 314-55-010 (4) was discussed and the only thing I would possibly add is something to help define noticeable taste. Tastes include bitter, sour, sweet, salty, and savory according to this link there is also astringent and false heat and false cold . What is Taste?> https://www.scienceofcooking.com/about_taste.htm What is Taste? Taste, Smell and more come into play in producing the right flavor Adding this could help minimize confusion when it comes to what is a flavor. I do not have anything to add to WAC 314-55-010 (40) at this time.
Email	Sarah Ross- Viles, Seattle & King County Public Health	9/3/2020	 I hope you are well. I wanted to follow up on my comment from the call earlier this week. I am CCing members of the YMPEP Practice Collaborative Retailer Education Workgroup, who are interested in these rules. Is it possible to import this definition into the WAC and add language that, "Youth access is to be considered on its own merits and not mitigated against older adult appeal and marketability." RCW 69.50.101(xx) "Youth access" means the level of interest persons under the age of twenty-one may have in a vapor product, as well as the degree to which the product is available or appealing to such persons, and the likelihood of initiation, use, or addiction by adolescents and young adults. Procedurably, I am not sure if the RCW definitions should also appear in the WAC. If not, then only the line above is necessary and would probably not be in the definitions.
Email	Lukas Hunter (pt 1)	9/15/2020	

			 Revision of Section 4: (4): "Characterizing flavor" means a clearly noticeable taste, other than one of cannabis, resulting from an additive or combination of additives, including but not limited to fruit, spice, herbs, alcohol, candy, or menthol, or that is noticeable before or during consumption of the cannabis product. This section although does take a different route than the language passed into statute (HB 2826) ultimately it accomplishes the same end goal of restricting flavors in MJ vapor products. For consistency the term "cannabis" should be replaced with "marijuana" as cannabis is not defined in statute or defined in rule, where the term marijuana is the basis for all regulated cannabis definitions. I believe the utilization of the term "Taste" is paramount in this definition as it provides clear guidelines to consumers and processors and doesn't need to be elaborated on to create ambiguity within the rule. Finally further description prior to the first mention of marijuana. I would hope to see the following changes made: (4): "Characterizing flavor" means a clearly noticeable taste, other than one of what naturally occurs in cannabis marijuana, resulting from an additive or combination of additives, including but not limited to fruit, spice, herbs, alcohol, candy, or menthol, or that is noticeable before or during consumption of the cannabis marijuana product. (New Section): "Marijuana Vapor Product" With the implementation of rule focusing on marijuana vapor products I believe we should add a section defining marijuana vapor distinctly from marijuana concentrates.
			I believe the following language would be an appropriate substitute:
			"Marijuana Vapor Product" A marijuana concentrate that is consumed by the utilization of a heating element and does not require the
			combustion of the marijuana concentrate for consumption.
Email	Lukas Hunter (pt 2)	9/15/2020	Revision of Section 40: (40) "Terpenes" means a class of compounds that imparts smell, taste, or both occurring in the cannabis plant which consist of a carbon
	_,		 (a) "Botanical terpenes" means constituents derived from a spice, fruit, vegetable or vegetable juice, edible yeast, herb, bark, bud, root, or leaf or similar plant material. Their significant function in cannabis products is flavoring rather than to act as a drug. This includes: (i) Essential oil, which is natural oil typically obtained by distillation and possessing the characteristic fragrance of the plant or other source from which it is extracted; (ii) Oleoresin, which is a natural or artificial mixture of essential oils and a resin;
			(iii) Distillate; or
			 (iv) Any product of roasting, heating, or enzymolysis which contains terpene. (b) "Synthetic terpenes" means any terpene that does not occur in the cannabis plant, or in other botanical sources, and is produced through chemical manipulation in a laboratory or similar facility.
			(c) "Terpenoids" means the natural products and related compounds formally derived from isoprene units, or "isoprenoids," that have the same meaning as that found in the current version of the International Union of Pure and Applied Chemistry (IUPAC) and as hereafter amended.
			This is a challenging section to grab a hold of as the research and understanding of cannabis terpenes and terpenoids is still evolving. I like a substantial part of the draft conceptual rules here but would like to see a few changes/amendments. 40, (a) Botanical Terpenes. This section could be simplified in its examples and the end section referring to the function is inappropriate. As
			we move forward with taking marijuana out of prohibition to refer to botanical flavoring as "act as a drug" seems regressive. Besides the regression, we are aware of the effects of the naturally occurring terpenes in cannabis having a drastic effect on the consumers
			endocannabinoid system. To state botanical terpenes may not have an effect on the consumers endocannabinoid system seems limiting. The request for the removal of this language is not to "open a door", but to recognize that these naturally occurring terpenes can have an effect

			 on a person's experience with the cannabis product. Additionally in the closing statement "this includes:" I would like to see "this includes but is not limited to" this language provides the industry with the ability to continue to develop new means of extracting and infusing botanical terpenes, and there is not a limiting factor of how botanical terpenes are derived in HB 2826. With the above statements in mind I would like to propose the following language: "Botanical terpenes" means constituents derived from a spice, fruit, vegetable or vegetable juice, edible yeast, herb, bark, bud, root, or leaf or similar plant material. Their significant function in cannabis products is flavoring rather than to act as a drug. This includes, but is not limited to: (i) Essential oil, which is natural oil typically obtained by distillation and possessing the characteristic fragrance of the plant or other source from which it is extracted; (ii) Oleoresin, which is a natural or artificial mixture of essential oils and a resin; (iii) Distillate; or (iviii) Any product of roasting, heating, or enzymolysis which contains terpene. 40, (b) "Synthetic Terpenes". This section does a good job with defining and providing clarity as to what a synthetic terpene is and further assisting the reader in understanding what cannot be in a marijuana vapor product. The only thing I would like to propose is to utilize a defined term in this section to further bolster the definition of a synthetic terpene. (b) "Synthetic terpenes" means any terpene that does not occur in the cannabis sativa plant, or in other botanical sources, and is produced through combining non-terpenoid compounds".
Email	NW Cannabis Solutions, Becca Burhardi, Kelsey Holstrom	9/29/2020	Disclosure Form - In question #3 under the Additives heading, Alpha bisabolol is listed as a thickener; it is also a common terpene – how is the LCB determining which terpenes are considered thickeners and why is alpha bisabolol listed here? - #4 & #5 under the Additives heading, #4 reads "Do you flavor your product with terpenes derived 'directly and solely from marijuana as defined by RCW 69.50.101, hemp plants grown and tested by state law, or from another biological source" and #5 reads "Do you flavor your product with botanically-derived terpenes" I don't understand the distinction between these questions; they appear redundant Under Additives currently prohibited heading, #1 asks if the vapor product is flavored with "synthetic terpenes or essential oils" – however, essential oils is listed under the LCB's definition of "botanical terpenes", so it does not appear accurate to disclose them in the prohibited heading We also share concerns regarding intellectual property and proprietary information being disclosed and subject to Public Records Requests.
Email	NW Cannabis Solutions, Becca Burhardi, Kelsey Holstrom	9/29/2020	 We also share concerns regarding interfectual property and propretary information being disclosed and subject to Fubic records requests. WAC 314-55-550 (2) (b) is missing a key word We have some general concerns with the vagueness of the language in (2) (b) (iv) - how is the Board confirming the information? How is the Board determining the reliability of a source? The science concerning inhaled additives is still new and is changing all the time, particularly in regards to public health; there is potential for incomplete information to be presented as conclusive. I would recommend changing this to read in a way that specifies the validity such as: "Other information sourced from peer-reviewed scientific literature, confirmed to be reliable and current by the Department of Health" For (2) (d) thru (e), should producer processors expect a new vapor disclosure form every year? How are changes to the list proposed and confirmed & is there opportunity for public comment and stakeholder input during that process? Most importantly, how are changes to the list implemented in terms of compliance and how long will producer processors be given to make potentially drastic changes to their processes and their packaging?
Email	Lukas Hunter	9/29/2020	Thanks for leading the listen and learn session today, as always it is wonderful to have the interactive experience with the industry and the WSLCB in the rulemaking process. From my prior email I would like to add, that when I look at this form I have been looking at reductions (I think that is rather clear from my comments), but where I would like to see things removed I see them covered in other sections of rule or policy. Transparency is paramount when it comes to public health and safety, and in the unfortunate event of sickness resulting from the consumption of these products finding the root cause it necessary. The two areas where I want to be cautious is in accidental public disclosure, and ease of filling out these forms. During the listen and learn a retailer even requested to have access to these forms to see what is in the products (directly in opposition of concerns around intellectual property safety) and this retailer along with all consumers should have access to this information per packaging

(record keeping requirements) I see a lot of opportunity to remove line items from this form.	and labeling rules. Further the safety and protection around the disclosure of intellectual property was a concern from the inception of this form last summer when we drafted the initial version. I would hope we can find a safe way for disclosure to take place without giving away our secret recipes that make our products unique to each company, what we referenced last summer was the federal requirement for ingredient disclosure for cosmetic products https://www.fda.gov/cosmetics/cosmetics-labeling/trade-secret-ingredients Then with the disclosure of additional documentation like Safety Data Sheets (SDS) or additional information that adds the requirement to attach additional documentation beyond the form seems it could be inaccessible with a variety of computer know how and there are already requirements from LnI and WSDA to keep SDS on site for all chemicals/compounds that require a SDS. Without a requirement in rule to disclose this information and a requirement to keep these records on site per 314-55-1055 and further reinforced by WAC 314-55-087 (secord lappend) here a plat of computer in the second plane there are already in a sum of the second plane to be a second plane to be an explaned by the second plane to be a second

Public Comment — Marijuana Vapor Products Attachment B – Listen & Learn Session #1, Held September 1, 2020 re Conceptual Draft Rules WAC 314-55-010(4) and (40)

Source	Commenter	Date Received	Comment
L&L #1	Lukas Hunter	9/01/2020	WAC 314-55-010 Subsection 4 - Replace "cannabis" with "marijuana"
L&L #1	Crystal Oliver	9/01/2020	WAC 314-55-010 Subsection 4 - Strike second "noticeable" in definition
L&L #1	Hailey Croci	9/01/2020	WAC 314-55-010 Subsection 4 – Add "aroma" after "taste"
L&L #1	Chris Masse	9/01/2020	WAC 314-55-010 Subsection 4 – Concerned about how this definition works with the bill/ couldn't reconcile the definition in the draft with the way "characterizing flavor" is used in bill
L&L #1	Jaramie Thomas	9/01/2020	WAC 314-55-010 Subsection 4 – Should specifically include "botanical terpene"
L&L #1	David Haldreth	9/01/2020	WAC 314-55-010 Subsection 40 – Believes it should start with terpinoidsat the top, and below that should be terpenes. The botanical terpene definition should cross out constituents.
			WebEx Chat from david heldreth to everyone: 2:33 PM s is flavoring rather than to act as a drug. This includes: (i) Terpenes derived from essential oil, which is natural oil typically obtained by distillation and possessing the characteristic fragrance of the plant or other source from which it is extracted; (ii) Terpenes derived from oleoresin, which is a natural or artificial mixture of essential oils and a resin; (iii) Terpenes derived from Distillate; or (iv) Any product of roasting, heating, or enzymolysis which contains only terpenes. (b) "Synthetic terpenes" means any terpene that does not occur in the cannabis plant, or in other botanical sources, and is produced through chemical manipulation in a laboratory or similar facility. (c) "Terpenoids" means the natural products and related compounds formally derived from isoprene units, or "isoprenoids," that have the same meaning as that found in the current version of the International Union of Pure and Applied Chemistry (IUPAC) and as hereafter amended.
L&L #1	Kelsey Holmstrom	9/01/2020	WAC 314-55-010 Subsection 40 – WebEx Chat from Kelsey Holstrom to everyone: 2:33 PM (40) (a) (iv) - Any product of roasting, heating, or enzymolysis which contains terpene.Should be plural "terpenes"
L&L #1	Brad Douglas	9/01/2020	WAC 314-55-010 Subsection 40 – Incorporate the CFR by reference 21 CFR 101.22 instead of defining it separately
			WebEx Chat from Brad Douglass to everyone: 2:37 PM Botanical Terpenes = Natural Flavors. 21 CFR 101.22 WebEx Chat from Brad Douglass to everyone: 2:38 PM https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/CFRSearch.cfm?fr=101.22
L&L #1	Crystal Oliver	9/01/2020	WAC 314-55-010 Subsection 40 – For the list of items at the beginning: "spices, " believes the order or the list should be modified Disagrees with the language "rather than act as drug" Question why "oleoresin" is included in the definition Question why "distillate" is included in the definition of "terpene"
L&L #1	Chris Masse	9/01/2020	WAC 314-55-010 Subsection 40 – Recommend striking terpenoid, isoprenoid since those terms aren't used in the bill
L&L #1	Lukas Hunter	9/01/2020	WAC 314-55-010 Subsection 40 – Disagrees with the language "rather than act as drug" Disagrees with the language about "chemical manipulation" Would like to have a general definition of "marijuana vapor product," will send that later
L&L #1	Shawn DeNae	9/01/2020	Definition of "Harvest," "lot," and "strain." Remove "strain" from the definition of "harvest" and "lot"

Public Comment — Marijuana Vapor Products

Attachment C – Listen & Learn Session #2, Held September 29, 2020 re Conceptual Draft Rules WAC 314-55-550 and Marijuana Vapor Product Disclosure Form

Source	Commenter	Date	Comment
Jource	connenter	Received	Comment
L&L #2	Kelsey Holmstrom	9/29/2020	WAC 314-55-550 - Science concerning additives is changing all the time. Potential for incomplete information to be presented as complete. Add something to specify the validity
			From chat bar: (2)(b) is missing a key word, I'm guessing it should be "data" (2)(b) iv) How is the Board confirming the information? How is the Board determining the reliability of a source? The science concerning inhaled additives is still new and is changing all the time, particularly in regards to public health; there is potential for incomplete information to be presented as conclusive. I would recommend changing this to read in a way that specifies the validity such as: "Other information sourced from peer-reviewed scientific literature, confirmed to be reliable and current by the Department of Health" For (2) (d) thru (e), should producer processors now expect a new vapor disclosure form every year? How are changes to the list proposed and confirmed, is there opportunity for public comment and stakeholder input during that process? Most importantly, how are changes to the list implemented in terms of compliance and how long will producer processors be given to make potentially substantial changes to their processes and their packaging?
L&L #2	Lukas Hunter	9/29/2020	WAC 314-55-550 - Lack of definition behind "public health." Suggestion to add a definition to public health to the definition section in the chapter. Will email
L&L #2	James McCray	9/29/2020	WAC 314-55-550 - No need for section on devices; should ban sale but not use. Can/how will the LCB regulate the use of a device?
L&L #2 L&L #2	Kelsey Holmstrom	9/29/2020	Disclosure Form - Q 3 under additives - what is a thickener? Distinction between botanically derived? Q3: Additivesalpha-bisabolol—could also be a terpene. How are these Botanically derived/ biological source—is there a distinction? From chat bar: NWCS also has concerns regarding proprietary information being disclosed, echoing Lucas's comment. In question #3 under the Additives heading, Alpha bisabolol is listed as a thickener; it is also a common terpene – how is the LCB determining which terpenes are considered thickeners and why is alpha bisabolol listed here? #4 & #5 under the Additives heading – #4 reads "Do you flavor your product with terpenes derived 'directly and solely from marijuana as defined by RCW 69.50.101, hemp plants grown and tested by state law, or from another biological source" and #5 reads "Do you flavor your product with botanically-derived terpenes" I don't understand the distinction between these questions; they appear redundant. Under Additives currently prohibited heading, #1 asks if the vapor product is flavored with "synthetic terpenes or essential oils" – however, essential oils is listed under the LCB's definition of "botanical terpenes" which are permitted, so it does not appear accurate to disclose them under the prohibited heading. Disclosure Form - Applicable to all mj concentrates for inhalation; concern regarding public disclosure of ingredients. Not just applicable to "MJ Vapor Products" –rule language uses "MJ Vapor Concentrates." Expand to "MJ Vapor Concentrates" How will the form be protected from public disclosure? Very sensitive data included on the form
L&L #2	Crystal Oliver	9/29/2020	Disclosure Form - Concern over proprietary nature of products
L&L #2	Jamie Shipman	9/29/2020	Disclosure Form - Can retail stores obtain these lists? Not currently available. Would this form/ collected data be something retail stores could have access to? Would be helpful
L&L #2	Lukas Hunter	9/29/2020	Disclosure Form - Specific to a batch, thus required to be filled frequently. Highly redundant and cumbersome. Remove source of cannabis. Remove additives currently prohibited. This form has to be filled out quite a few times. This is going to create a lot of redundancy if we have to fill this out from every new distillate. Lukas is up to 312 submissions already The location of a distributor is sometimes proprietary information "Additives currently prohibited" section is not necessary, creates a length to the form that is unnecessary

Public Comment — Marijuana Vapor Products

Attachment C – Listen & Learn Session #2, Held September 29, 2020 re Conceptual Draft Rules WAC 314-55-550 and Marijuana Vapor Product Disclosure Form

L&L #2	Hailey Croci	9/29/2020	Disclosure Form - Anything regarding heating devices or testing of devices? Depending on the heating range of the devices, could interact differently with the ingredients
L&L #2	Crystal Oliver	9/29/2020	Disclosure Form - Possibly separate form for hardware? When does this form, and how often, does form need to be submitted? For each strain? Clarify and simplify. Suggest separate form for hardware. Clarification on when the form is to be submitted/ how often it should be submitted? Submit one for each strain of the product seems excessive. Take a look and see if it can be clarified or simplified.
L&L #2	James McCray	9/29/2020	Disclosure Form - Conceivable that an ingredient could be "bad" from one supplier but not others. Responding to the comments about distributor information being proprietary: Ingredient could be bad from one supplier and not from others, so this information is important in the event that there are recalls. Balance the consumer/ public health and safety with interest in protecting proprietary information
