

July 20, 2021 1:21 PM from diana isaïou to all panelists: diana isaïou - american baked co

July 20, 2021 1:22 PM from Jason Poll to all panelists:Is this the spot for introductions ???

July 20, 2021 1:22 PM from Matthew Friedlander to all panelists: Matthew Friedlander, owner of Skagit Organics.

July 20, 2021 1:22 PM from Audrey Vasek to everyone: Hello everyone, this is Audrey Vasek-- Policy and Rules Coordinator with the LCB. Please feel free to message me with any troubleshooting/ technical questions or email rules@lcb.wa.gov

July 20, 2021 1:30 PM from Alexis Ames to all panelists: Alexis Ames - Fairwinds

July 20, 2021 1:48 PM from Matthew Friedlander to everyone: That last point made seems to be the main health concern of these chemically synthesized cannabinoids.

July 20, 2021 2:23 PM from Kent Haehl to host & presenter: If something is the same on a molecular level (just made from a new process) why would it need to be pointed out as different?

July 20, 2021 2:31 PM from Crystal Oliver to everyone: What if customers care about the sustainability and what waste are generated by the various chemicals used in the process?

July 20, 2021 2:32 PM from Kent Haehl to all panelists: A catalyst by definition is not in the final product. I agree with Brad. If it is not in the final product it does not matter. A simple pH test would show this in most cases.

July 20, 2021 2:33 PM from Jim MacRae (privately): For the record, clean cannabis is safer than each and every one of the chemicals that have been listed here. It was touched on by the panelists, but it should be stressed repeatedly that cannabinoids are relatively safe. Until such time as chirality or isomerization or oxidization or WHATEVER are shown to actually decrease the safety of cannabinoids, we should not waste too much mental or organizational effort assuming that such hidden dangers exist.

July 20, 2021 2:34 PM from Crystal Oliver to everyone: I don't think consumers right to know is immaterial.

July 20, 2021 2:38 PM from Kent Haehl to host & presenter: Hemp-derived THC done correctly has more identifiable total cannabinoids than from other methods. So why are we looking to create a higher bar for something new than what we accept now for what is being held up as the standard.

July 20, 2021 2:40 PM from Kent Haehl to host & presenter: Shawn has a great point testing matters. The state should adopt mandatory pest and heavy metals tests right away. WA needs to at least be in alignment with our peer legal markets. We should start there.

July 20, 2021 2:41 PM from Jim MacRae to all panelists: I'll agree with Marcus and, further, would like to stress the irony that hemp-based product inverted to the regulated cannabis system is tested at a level that exceeds that enjoyed by over 98% of the products produced by regulated cannabis wholesalers. The truth can, occasionally, hurt.

July 20, 2021 2:42 PM from Crystal Oliver to everyone: Marcus, why didn't you seek to have law & rule changed first rather than attempting to circumvent and violate law and rule and then seek "regulations"?

July 20, 2021 2:42 PM from Crystal Oliver to everyone: Marcus, How will more regulations and testing help if folks like you all continue to break the rules & law?

July 20, 2021 2:51 PM from Crystal Oliver to everyone: Unicorn Brands describes what they are

doing here: <https://drive.google.com/file/d/1Hwk9Zah2n3FHds6GwiXhr4vg-ETHaBOt/view>

July 20, 2021 3:12 PM from Jeff Merryman to all panelists: I have a safety question with the research from the Chernobyl disaster and the cannabis plant being able to uptake heavy metals. also knowing about the Green Run iodine-131 release from Hanford in 1949 with secret ongoing heavy metal releases happening until the 1960's on the population. could any of these process's that are being talked about today also bring in these toxic heavy metals into the products?

also since we don't test for any of this stuff could we be poisoning our consumers?

July 20, 2021 3:28 PM from Audrey Vasek to Mark Tegen (privately): Hi Mark, if you're having difficulty connecting your audio/mic to webex, this page has some information: <https://help.webex.com/en-us/cjr7xq/Connect-to-Audio-and-Video-in-Cisco-Webex-Meetings>

July 20, 2021 3:29 PM from Audrey Vasek to everyone: If your computer does not have a microphone, you may need to grab a pair of headphones with a mic

July 20, 2021 3:30 PM from Audrey Vasek to everyone: Apologies everyone--that last message was meant for troubleshooting how to connect audio/mic to webex

July 20, 2021 3:33 PM from Micah Sherman (privately): there was some questions asked before that one, hope they don't get missed

July 20, 2021 3:33 PM from Micah Sherman (privately): Thank you!

July 20, 2021 3:35 PM from Gregory Foster (privately): Hello Audrey, here was a question I offered earlier in the chat: Can the panelists confirm my understanding that cannabis plants produce molecules of one chirality; so synthesized molecules of a different chirality would technically be artificial cannabinoids?

July 20, 2021 3:36 PM from Jason Poll to all panelists: Is this a real question ?

July 20, 2021 3:37 PM from Audrey Vasek to Gregory Foster (privately): Got it, thanks Greg

July 20, 2021 3:37 PM from Audrey Vasek to Gregory Foster (privately): Sorry I did not see your question previously. I'll get to yours next

July 20, 2021 3:37 PM from Jim MacRae to all panelists: To flip a question outside of the regulated (I-502 and SSB-5052) world, would a CBD edible using hemp-based material and sold in a gas station / convenience store / coffee-shop that was 0.2999% THC by weight be considered a hemp-based product and, therefore, legal?

July 20, 2021 3:41 PM from Micah Sherman (privately): Those are all the questions I could find from earlier

July 20, 2021 3:42 PM from Audrey Vasek to Micah Sherman (privately): Thank you Micah!

July 20, 2021 3:59 PM from Jim MacRae to everyone: Thank-you. Very useful and informative discussion.

July 20, 2021 3:59 PM from Jeff Cole to all panelists: Thanks to all panelists and participants.

July 20, 2021 4:01 PM from Audrey Vasek to everyone: Our rules inbox is rules@lcb.wa.gov

July 20, 2021 4:01 PM from Audrey Vasek to everyone: Thank you everyone!
