

RANK	BOARD INTERESTS	IDENTIFIED CSWG INTERESTS
4	Tackling how we might define “structure or function” as the term relates to medically compliant products. We issued a policy statement on the topic in 2021. Washington is the only state that allows cannabis products to make such claims. If there is federal legalization, the FDA will be tasked with determining how the terms apply to similar products. Could the CSWG help to inform the LCB beyond our current policy statement?	<p>Consistent product labeling (short term)</p> <p>Education – what type of information can help people make better decisions about what they consume? (short term)</p>
5	Research and a better understanding of cannabis and it’s impact on driving fatalities.	<p>How we might determine what is “impairing” (LCB hosted a series of discussions last year around this topic that might be helpful to review that can be viewed here – scroll down to the bottom of the page under “Deliberative Dialogues”) (short term)</p> <p>Hemp derived cannabinoids (short term)</p>
3	Future review of proposed legislation related to regulating cannabinoids.	<p>What types of processes might be allowable to create safe products? (Short term)</p> <p>Defining “regulation” of cannabinoids (short term)</p> <p>Hemp derived cannabinoids (short term)</p>
1	Diminishing the gap between scientific expression and regulatory/statutory expression. Creating an agreed upon language or nomenclature around the terms we use.	<p>What types of processes might be allowable to create safe products? (short term)</p> <p>Defining “regulation” of cannabinoids (short term)</p> <p>Hemp derived cannabinoids (short term)</p> <p>Education – what type of information can help people make better decisions about what they consume? (short term)</p>

<p>2</p>	<p>Helping LCB develop policy, including policy related to emerging issues that LCB may not be aware of but the scientific community may be, or conversely, issues that LCB may become aware of by way of rule petition or external stakeholder interaction.</p>	<p>What types of processes might be allowable to create safe products? (Short term)</p> <p>Hemp derived cannabinoids (short term)</p> <p>Education – what type of information can help people make better decisions about what they consume? (short term)</p> <p>Funding (long term)</p> <p>Harmonizing testing standards (long term)</p> <p>Future of interstate commerce (long term)</p> <p>Long term approaches that LCB should take with research issues (long term)</p>
