Release Notes

BUG FIX (13296) – Primary and Secondary integrators lost ability to access CCRS. This was fixed and deployed to the test environment. The system is now allowing for all integrators to view their associated licenses.

BUG FIX (13385) – Issue was found that inventory transfers were requiring both the to and from license to be associated with the integrator. This was fixed and deployed to the testing environment. The system is now validating against only the to licensee as expected.

BUG FIX (13387) – Issue was found that plant destruction files were selecting plants that matched their external identifier. This was causing the system to detect the incorrect plant destruction based on the incorrect plant. This was fixed and deployed to the testing environment. The system is now validating plant destructions based on licensee id to validate relationships query on plant destructions as expected.

BUG FIX (13393) – Plant transfer errors were being returned to the user all in one column. This was fixed and deployed to the testing environment. The returned error files for plant transfers are now spaced out into different columns for better read.

BUG FIX (13492) – Issue was found that licensee's were not able to update plant transfers and inventory transfers as the system was viewing the update as a duplicate. This was fixed and deployed to the testing environment. The system is now accepting update plant and inventory transfers as expected.

BUG FIX (13493) – Issue was found that an integrator was not able to insert, update or delete a plant or inventory transfer. This was fixed and deployed to the testing environment. The system is now allowing for integrators to insert, update and delete plant and inventory transfers as expected.
